IV. RESEARCH

Program Statement

My research program has been focused on the planning and management of natural resources. Within this theme I have focused my efforts in two areas. My first area of research concentrates on visitor experience in parks and protected areas. My work is applied yet theoretically grounded and seeks to understand the visitor experience so it can be translated into usable knowledge. Given changes in technology, demographics, urbanization, and social trends, there are numerous factors that can impact peoples' use of our natural environment. I have conducted various recreation user studies assessing their behaviors, motivations, attitudes, and values and worked with managers to connect this information to specific management strategies. This research on visitor experience has provided managers with relevant information that has been implemented into management plans and at the same time has added to the body of knowledge on the use of our parks and protected areas.

A second line of research is directly tied to my central research focus which is dedicated to stakeholder involvement. Concerned citizens and the general public are increasingly becoming engaged in natural resource decision-making. Individuals often form voluntary associations (formal and informal) so they can be recognized and included in the planning process. Input from stakeholders and their influence in the planning and management of parks and protected areas is an ever-present and complex issue for resource managers in various settings. The research projects I have been involved with have focused on the effectiveness of voluntary associations, motivations/barriers of participation, and their influence in policy development. As parks and protected areas experience mounting pressure in balancing visitation and development, managers are mandated to obtain feedback from stakeholders to adhere to legislative requirements and ensure the sustainability of public resources. Public participation can be a means and an end and

both need to be explored from all parties that are involved.

My research focus is applied; hence, I publish in natural-resource related journals with that emphasis, e.g., *Environmental Management*, *Journal of Park and Recreation Administration* and *Human Dimensions of Wildlife*. When appropriate, I have published my work in more theoretical journals, e.g., *Leisure Sciences*. In the first half of my career, I was usually sole or lead author on the majority of my refereed journal articles in order to get my work out in the field and develop my reputation. My research program has obtained funding in excess of \$3M and supported numerous students in my lab (SERL) and with the CSRE. Over the last decade, I have concentrated my efforts in mentoring my graduate students, so now their names often appear first and mine is second or even third. The goal for my graduate students is altruistic, helping them get their research published, developing a research niche and contributing to the body of knowledge in the field. My research results have been incorporated into my graduate and undergraduate courses through assignments and relevant publications.

V. GRANTS AND CONTRACTS AWARDED

Funding to support my research program has come from numerous sources, primarily the key federal land managing agencies, e.g., National Park Service, USDA Forest Service. My record of funding has been consistent and has allowed me to support an excellent team of graduate students regularly in my lab and develop a nationally supported research program. Career funding with all PIs has totaled **\$3,225,668.00** with **\$2,175,811.00** attributable to my program. My work continues to be disseminated frequently to managers in the field and scholars in academia.

VII. TEACHING

Program Statement

The university environment is a venue where students not only learn about specific academic subjects but also about priorities, values and respect for each other which I feel should be incorporated into the classroom. The basis for my teaching is to provide students with the required skills they must have to understand, analyze, and solve key issues in our field. These skills whether they are based on key concepts, theories or current trends are critical at the undergraduate and graduate levels to prepare students for their professional careers. I have introduced new undergraduate and graduate courses in order to help students gain the needed content they need for future careers and meet curriculum needs. My current research, experience at previous universities, and professional involvement has enabled me to guide students in helping them learn more about our field. The courses I have taught have been centered in the areas of research and natural resources.

In all my courses, I help students learn through a variety of instructional materials and approaches ranging from the more traditional, e.g., exams, guest lectures, to more interactive methods, e.g., panel discussions, field trips. For undergraduate students, I help them learn key topics, while fostering critical thinking and writing skills. I feel “hands-on” experience is tantamount in working with undergraduates so I engage them outside the classroom as frequently as possible. Practical, transferable skills are especially evident when they conduct mini-studies through my undergraduate research course. For graduate students, I work with them to understand the theoretical underpinnings of our field, providing not only content but training they need to conduct projects on natural-resource focused issues. Outside the classroom, I mentor my graduate students on teaching, grantsmanship and writing journal articles. Professional development is another necessary component of career-building which I promote because it helps students network with practitioners/academics. Over the years, my course evaluation scores have exceeded the RPTS Departmental average for graduate/undergraduate courses.

Courses Taught at Texas A&M University

1. **RPTS 336 Recreation Research and Analysis.** The material and assignments from this course familiarizes the student with various techniques, concepts, and issues involved in conducting and understanding research in recreation, parks, and tourism settings, e.g., reading research articles, scientific method, data collection procedures, questionnaire design, and data reporting.
2. **RPTS 609 Social, Economic, and Cultural Issues in Outdoor Recreation.** This course examines social/cultural phenomenon and trends that impact outdoor recreation activities, participants, research, planning, and management. This class investigates the current literature in the field as well as the stakeholders, scientists, and agencies that use, manage

and conduct research about participants and natural resources.

3. **RENR 400 Study Abroad in Natural Resources** (South Pacific). This course exposes students to issues of natural resource management, sustainability, ecology and culture in one of three countries: Fiji, New Zealand and Australia.
4. **RPTS 689 Working with SAS**. This course taught students the basics of SAS, a statistical program and introduced them to finding and working with secondary datasets.

Guest Lectures

- “Managing for Park Visitors.” Presented to RPTS 201: *Foundations of Recreation and Parks*, Spring 2014.
- “Using Secondary in Recreation, Parks and Tourism.” Presented to the *Graduate Research Seminar*, Fall 2012.
- “Trends in Outdoor Recreation Participation.” Presented to the *Graduate Research Seminar*, Fall 2011.
- “Outdoor Recreation Benefits.” Presented to RPTS 201: *Foundations of Recreation and Parks*, Summer 2011.
- “Understanding Park Visitation Data.” Presented to RPTS 201: *Foundations of Recreation and Parks*, Spring 2010.
- “A Qualitative Analysis of National Outdoor Recreation Surveys.” Presented in the *CSRE Brownbag Seminar Series*, Fall 2009.
- “The CSRE: Who We Are, What We Do and How to Get Involved.” Presented in the *CSRE Brownbag Seminar Series*, Fall 2009.
- “Writing Grants for Research” Presented to RPTS 336: *Recreation Research and Analysis* Spring, 2008.
- “The Students all Learn the Same, Right? Learning Styles, Assignments and Exams” Presented at the *Graduate Teaching Seminar*, Fall 2005.

Graduate Student Support

I believe it is incumbent upon nay faculty member to support graduate students and engage them in research. As Director of the Center for Socioeconomic Research and Education (CSRE) and later in my Socio-Environmental Research Lab (SERL), various research projects have provided funding for a team of graduate students who obtained experience in conducting research, data collection, project management, and grant writing. My ability to fund graduate students has been consistent during my entire research program. I have fully or partially funded (at least one semester) over 60 graduate students.

Role in Obtaining External and Internal Funds to Support Teaching Enhancement

- In 2014, I was Co-PI with 22 other faculty on the Applied Biodiversity grant (\$300,000) “Integrating Multidisciplinary Research and High Impact Learning into Undergraduate and Graduate Education”. This grant will allow both undergraduate and graduate students to obtain high impact learning experiences to conduct international research, interdisciplinary training, attend study abroad programs and build a community of scholars at Texas A&M University.
